WHERE IT GOES
This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Web: 10 mm plate 92 x 232 mm. It runs in the cut, behind the discs.

Top plate 195 x 99 x 20 mm and lower plate 195 x 79 x 20 mm, welded across the top and bottom ends of the web.

Upper housing 90 x 60 x 101 mm on the top plate, beside the web; bore 57 mm on a line 49.5 mm above the nip for the eccentric bush (57 mm outside, 47 mm bore offset 3 mm) and one 6005 bearing.

Lower housing 90 x 60 x 96 mm under the lower plate; bore 47 mm on a line 49.5 mm below the nip for two 6005 bearings.

Bore both housings in one setting so the shafts are parallel within 0.05 mm over 60 mm; the disc faces must meet on one plane.

Fit: the drop bar is welded to the top plate over the nip line; four M8 tapped holes in the upper housing's outer face and the top plate's end take the drive case. Make two frames: the second is the ring head (DMP-DWG-122).

Check: turning the eccentric moves the upper shaft 6 mm.
