WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Two plates 140 x 182 x 8 mm, 22 mm apart, joined by a 1.5 mm sheet band all round: the band is the chain guard.

Bores (both plates, drilled together): upper shaft 26 mm clear on the disc line; jackshaft 42 mm for a 6004 bearing, 80 mm above it; crank shaft 42 mm for a 6004 bearing, 60 mm back and 120 mm above the disc line.

Sprockets #35: 15 teeth on the upper shaft and on the jackshaft (first chain, 1 to 1); 28 teeth on the jackshaft and 12 teeth on the crank shaft (second chain, 2.33 to 1).

Crank: 20 x 12 mm arm, 155 mm between centres, 24 mm grip 100 mm long free to spin; it turns well clear of the drum.

Fit: inner plate bolted to the upper housing and the top plate with four M8 screws.

Check: 2.33 crank turns turn the discs once; nothing rubs.

DRUMPANEL
