WHERE IT GOES
This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

The ring head is a second shear head made to DMP-DWG-109 to 111 with no drive; this sheet adds the parts that join it on.

Spacer plate 115 x 270 x 10 mm: four 13 mm holes over each top plate; the ring head end slotted so the nips sit 233 or 234 mm apart (the middle pass is 234 mm).

Coupling shaft: 25 mm bar 135 mm long, a 6 mm dog across each end to engage the cross slots in the two upper shaft stubs.

Guard sleeve: loose plastic tube 31 mm outside over the coupling.

Fit: with the main head swivelled for ring cuts, lower the ring head through the slit, engage the coupling, bolt the plate.

Check: both upper discs turn together with the crank.
