P1	Making sketch for the prototype build plan	2026-10-03	AC

WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Make two. Shaft: 25 mm bright bar, 1,120 mm long, ends chamfered.

Rollers: 101.6 x 4 mm tube cut 100 mm long; two 10 mm discs

93 mm across, bored 25 mm, welded into each end of the tube.

Slide two rollers on, centred 147 mm each side of the middle of the shaft (294 mm apart, under the drum's rolling hoops).

Weld each disc to the shaft all round; skim the roller faces true in a lathe if they run out more than 0.5 mm.

Fit: the shaft runs in two UCP205 pillow blocks, 1,040 mm apart, grub screws tightened on the shaft. Shaft centres 380 mm apart.

Check: the shaft turns freely by hand in its blocks; the rollers run true within 0.5 mm.
