WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Head plate 120 x 120 x 12 mm: a 31 mm hole in the middle for the pivot pin and a 10.5 mm hole 45 mm from it for the index pin.

Drop bar: 50 x 50 x 4 mm RHS, 126 mm long, welded square under the head plate, centred, and at its lower end to the middle of the shear head's top plate (over the nip line).

Pivot pin: 30 mm bar 55 mm long with a 40 mm collar welded at its top; a 6 mm hole for an R-clip under the swivel plate.

Index pin: 10 mm, on a lanyard, through the head plate into one of the two holes in the swivel plate: slit or ring position.

Fit: the head hangs from the trolley on the pivot pin and turns through 90 degrees when the index pin is out.

Check: the head swings freely; the index pin drops in at both positions.
