WHERE IT GOES
This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Four slide blocks, 60 x 60 x 20 mm (20 mm thick = the side plate), bored 40 mm in the middle for a flanged bronze bush.

Fit in the 60 mm slots with 0.2 mm clearance; break the edges.

Six flanged bronze bushes 30 x 40 x 20 mm, 52 mm flange 6 mm thick, pressed in from the outside; a grease hole in each.

A 3 mm keeper plate on the inside face holds each block in.

Pinch screws M16 x 120 (two), bending screws M20 x 150 (two), each with a collar captured in the top of its block so it can push and pull; handwheels 90 mm (pinch) and 110 mm (bending) marked in 12 divisions.

Fit: the screws run in the threaded holes of the top bridges.

Check: each block slides its full travel by turning its screw.
